SUMMARY

Data Analyst with 5+ years of experience turning complex datasets into business decisions through **Python, SQL, Power BI**, and cloud platforms (Azure, AWS). Currently building **LLM-powered analytics agents** to automate insight generation. Track record of designing KPI frameworks, forecasting models, and executive dashboards delivering **\$200K+ in operational savings** and eliminating 70+ hours of manual reporting monthly across energy, healthcare, and fintech.

PROFESSIONAL EXPERIENCE

Data Analyst – BI & Analytics

Jul 2024 – Present

Baltimore Gas & Electric (Exelon), USA

Tech Stack: Python, SQL, Power BI (DAX), Azure ML Studio, SQL Server, Databricks, Git, Power Automate, LLMs, GitHub Copilot

- Own the enterprise analytics strategy for Customer Operations, designing KPI frameworks and an **executive Power BI dashboard** aggregating **28 metrics** for VP-level decision-making—**saving ~\$150K annualized** by eliminating manual reporting for 24 data stewards and enabling leadership to shift from monthly review cycles to weekly data-driven operational pivots.
- Building an **LLM-powered insights agent** that ingests post-call agent notes and surfaces real-time operational trends, enabling leadership to query issues, emerging topics, and floor-level performance via natural language—replacing hours of manual log review.
- Developing an **AI-driven customer feedback bot** using LLMs and RAG architecture to analyze customer sentiment, auto-classify service themes, and generate actionable insight summaries, projected to **reduce manual analysis effort by 60%**.
- Architected **call volume forecasting models** in Azure ML Studio visualized in Power BI, **reducing late staffing decisions by 40%**—directly changing how leadership plans seasonal headcount, saving **\$50K annually** in overtime and contractor costs.
- Engineered a unified Telephony and CC&B dataset using Python (Pandas, NumPy) and SQL (CTEs, window functions), achieving an **86% match rate across 2M+ records** and improving downstream data accuracy for 12+ operational reports.
- Designed DAX-driven performance dashboards tracking FCR, AHT, call volume, and capacity—**reducing time-to-identify underperforming agents from 5+ days to same-day**, enabling real-time coaching and intervention.
- Leverage **GitHub Copilot** and AI-assisted development to accelerate SQL optimization and automate Python ETL workflows, **cutting development time by 30%** (~\$35K in annual productivity gains).

Data Analyst

Jul 2023 – Mar 2024

Med-IQ, Inc., USA

Tech Stack: Python, SQL, Looker, Epic EHR, Apache NiFi, Git, Excel

- Analyzed **500K+ patient-level EHR and Census records** using Python and SQL, applying Chi-Square and ANOVA tests to uncover statistically significant health disparities ($p < 0.05$), directly informing program redesign across 3 therapeutic areas.
- Built automated preprocessing pipelines in Python, **reducing data preparation from 8 hours to under 2 hours** per refresh cycle and improving dataset standardization by 20%.
- Designed interactive Looker dashboards for equity and outcome trends, enabling self-service analytics and **reducing ad-hoc requests by 35%** (~15 fewer analyst hours weekly).
- Optimized ETL workflows using Apache NiFi and SQL, **cutting pipeline runtime by 30%**—accelerating dataset delivery from 3 days to under 1 day.

Data Analyst

Apr 2019 – Dec 2021

CognivAI Solutions, India

Tech Stack: Python (Matplotlib), SQL (PostgreSQL), Tableau, AWS, APIs, Logistic Regression

- Ingested and validated **16M+ transactional records** across APIs, credit bureaus, and partner systems, driving a **15% uplift in credit scoring accuracy** and directly impacting **\$2M+ in lending decisions**.
- Built logistic regression and decision tree models for risk stratification, **reducing default rates by 18%** across a portfolio of 50K+ accounts and **saving ~\$500K in annual credit losses**.
- Designed real-time Tableau dashboards for credit risk monitoring, **reducing reporting lag from 48 hours to under 4 hours** and enabling same-day risk intervention.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Matplotlib), SQL, R

AI & Machine Learning: LLMs, RAG, Prompt Engineering, GitHub Copilot, Logistic Regression, Random Forests, Decision Trees, Gradient Boosting

Analytics: A/B Testing, Hypothesis Testing, Forecasting, Feature Engineering, Statistical Modeling

Visualization: Power BI (DAX), Tableau, Looker, Advanced Excel (Pivot Tables, Power Query)

Platforms & Tools: Azure (ML Studio, Blob Storage), AWS, Databricks, SQL Server, PostgreSQL, MySQL, Git, Jira

EDUCATION

M.S. Information Systems, Data Science Specialization

Dec 2023

University of Maryland, Baltimore County

B.Tech. Electronics & Telecommunication

May 2020

Savitribai Phule Pune University – VIIT
